

Uriel Antonio Gomez Madriz

Game Designer | Musical Composer | Digital Animation Student | Programmer

Phone Number: +506 7110 8289 **Email:** urielgomezmadriz@gmail.com

Languages: Spanish (Native) | English (B2)

Professional Profile

Game Designer with a technical emphasis, with Foundational background in Software Engineering (focused on Basic Architecture and Requirements) and currently a Digital Animation student at Universidad Latina in Costa Rica.

Focused on the development of tools and architectures from scratch to support mathematical and mechanical logic for video games, along with technical documentation.

Self-taught musical composition based on Orchestral music, Experimental music, and sheet music production.

Technical Skills

- **Technical Game Design:** Documentation production, Level Design (Grey Boxing), Validate Project Viability.
- **Programming Languages:**

Principal: C#.

Complemento: C++, Lua.

- **Software & Engines:** Unity, Git/GitHub, VScode, JetBrains, FL Studio, MuseScore.
- **Music Theory:** Advanced Harmony, Orchestral Composition.
- **Basic Level Excel**

Key Personal Projects

Musical Compouser| Gummies Candy (March 2023)

Description:

Initially joined “Resistance Entertainment” (Enterprise in Panama, Remote) as Comic Writer and after some time entered in the Game Music Department to meet the Studio urgent production need i develop the entire soundtrack (4 original tracks) in 48 hours.

Note: due to internal Administration changes at the studio, my credits were not included in the final release; verified original files and scores are available upon request.

Applied Skills:

- Under Pressure Musical development and Mastering.
- Basic Harmony and Basic Game Music
- Work for Demand - Execution.

Project Director | Broken Leven Heart (02/05/2025 - 02/10/2025)

Description:

Lead Director and Design for an original collectible card game (CCG). Developed a comprehensive “Design bible” that defines core mechanics, player interactions and card systems Architecture and rules. The project currently exists as a polished tabletop prototype with complete system documentation and visual assets, maintaining a slow paced iterative development cycle.

Applied Skills:

- Creative Direction: Oversight of narrative, art style and thematic consistency
- Technical documentation: Authoring of comprehensive GDDs and Macro Design Specification.
- System Design: Definition of Core Mechanics, Game Loops and logic Flowcharts.
- Theoretical Testing.

Lead Developer | Obscure engine for Shell (C#, C++) (04/14/2026 - Present)

Description:

Obscure Engine is a high-performance framework originally created to master C# systems. It has evolved into a dedicated research and prototyping laboratory for game mechanics.

Its primary function is to enable the rapid development and testing of complex systems, specializing in AI behavior (passive/utility), procedural map generation, and 2D/isometric spatial logic.

It serves as my primary environment for algorithm research and mechanical prototyping, allowing me to validate complex design systems independently of external commercial engine constraints.

Applied Skills:

- Design, research, and development of the libraries, programs, and architectures required to make the game engine functional.
- Formalization of the Game Engine to allow the use of its modules beyond the engine itself, with the option to import them into Unity if necessary.
- Create Test Environments completely independent of more complex systems.

Economical Game Design | Starlight collector (07/11/2025 - 07/17/2025)

Description:

I develop the theoretical Game Economy Framework for one F2P simulator. This project focuses on the architectural design of data-driven systems, including probabilistic progression, resources scarcity and player retention loops.

The result documentation serves as an architectural study on how to mathematically design and balance complex game economies independently of the final implementation.

Applied Skills:

- Application of Human Behavior for game design
- Economical mathematics for constructing and balancing game economy in quantitative analysis situations.
- Probabilistic Design: System Base on Statistic and Probabilistic results.
- Main Game loop Design
- Pure Mathematical Theory of Games Apply to video games

Musical Composer & Musical Design | FNF vs Chuysmik Beta 1.5 (9/7/2025 - 11/12/2025)

Description:

In this case I'm responsible for Technical audio auditing and Narrative sound design for the project, my role focused on critically analyzing the existing soundtrack, identifying the general and Technical issues and giving technical documentation with the solutions to optimize audio and audio integration.

Additionally, I composed and produced music for narrative interludes (The in game dialogs), granted cohesive atmospheric consistency between the narrative and the gameplay experience.

Applied Skills:

- Audio Auditing & Technical Troubleshooting: identify structural audio problems and deliver technical documentation to the development team with solutions.
- Narrative sound Design: Composing ambient music and scores for narrative-driven interludes
- Electronic Harmonic Analysis: Applying advance harmonic theory to generate complex sonic textures and soundscapes
- Technical Documentation: Generating audio specifications and technical workflows for the project's pipeline
- Post-Production: Mixing and mastering assets to ensure consistency in the game.

Musical Composer | Wildoria (09/11/2026 - 09/02/2026)

Description: Wildoria was a project worked on for a short time (approximately 3 months) in the role of Orchestral Composer, my principal role is not only make the music, also the SFX, Game Effects planification and the Musical Design entirely.

Applied Skills:

- Music and Sound Design: Complete Audio Production pipeline, From References to Implementation.
- Music Theory: Advanced Orchestral Composition, Sheet Music Notation and Re-Harmonization.
- Audio Engineering: SFX synthesis, sound design and final mastering.
- Audio Implementation: Planning and integration of game audio systems.

Musical & Sound Design, Game Designer | LCI Veritas game jam (10/7/2026 - 12/7/2026)

Description: I Participate in this game jam with only one objective: do has much music i can for has many people i can.

As a result I ended up doing music for over four projects and the sound design of my own jam team, including recording sfx and composing some of the music Twice.

Note: This game jam objective is purely creative.

Apply Skills:.

- Music and sound design: Complete audio production pipeline for fast delivery without references.
- Music Implementation: Unity implementation of audio and sfx.
- Audio Production: Record, Polish, Editing for sfx and music.

Education

- **Bachelor in Digital Animation** (Universidad Latina in Costa Rica) | 2026 – Present.
 - First cycle completed.
 - Studies in progress.
- **Studies in Software Engineering** (Initial Training) Universidad Fidélitas in Costa Rica | 2025.
 - Completed courses: Requirements Engineering, Basic Programming, Introduction to Programming
