

Starlight Collector

Game Design / Marketing and Monetization Document

Game Designers: Rosary Doll , Tony Dev
Game Engine: Roblox Studio
Genre: Simulator

Introduction

Starlight Collector is a cosmic, progression-based simulator where players explore floating islands, collect and evolve magical Starlight Orbs, unlock new areas, and participate in unique galactic events. The game features premium currency, a robust shop, VIP areas, daily rewards, and community-driven features.

Exploration is organized in regions, with each area holding something important to help the world grow and evolve, along with unlocking more ways to access new areas. The following document is only intended for early versions of the project or early post-production versions.

1.0.0 Game Loop and Monetization

Players start in the center of the map, an island based on a crystal-covered asteroid that serves as a tutorial and showcases the project's structure. It seeks to show the player how to play and how exploration works, based on a system of finding treasures scattered across the map.

Each treasure provides an experience equivalency, allowing you to explore simple puzzles and even solve more complex puzzles, all of which provide you with related rewards. As you explore, you'll be able to collect "Starlight Orbs," which vary in value from island to island. Collecting treasure gives you access to better tools.

Everything in the game gives you some amount of experience. Some more than others, for example:

Action Taken	Value in experience / Money
Sell orbs to any merchant	10-150 Xp / 1-500 Starlight
Find a treasure	50-450 Xp / 10-1000 Starlight
Solve a cipher	100-900 Xp / 100-1500 Starlight
Sell orbs to a specialized merchant	350-1000 xp / 150-2000 Starlight

The more explorer and the higher the level you have,unlockNew islands, each with new tools that can be purchased with "Starlight," a free currency for players that also allows them to acquire better orbs or access new treasures. This progression is complemented by a list of prerequisites known as "Starlight Milestones," each based on the corresponding island (Nebula Forest, Moon Base).

As a final point, all tools can be upgraded to obtain better stats or even specialize in specific types of orbs, which can be sold in a specialized way to a specific merchant who is in specific parts of the map, in order to seek to reward exploration and allow "Starlight Milestones" based on exploration or obtaining specific orbs.

As a second progression path, the player may prefer to obtain "Quantum" and "Singularity" orbs, which can be exchanged to obtain even more upgrades for your tools in order to make things easier or even buy tools to explore the map further.

To convert them it is necessary:

Method to achieve it	Amount	Resulting object
Go to Nebula Forest and get one of each of the orbs in the forest	1-3	Quantum
GO to the forest at the moon base and get one of each of the moon base orbs	1	Singularity

Under the same system, to be able to go to events you need one of each of these orbs in order to give them a purpose beyond the end of the game, the first time in an event is free but the following times will have to be paid either with the method already mentioned or by paying:

Event	Price
Seasonal Event / Limited Time Event	25 Robux for every three attempts
Major Event of the Season / Black Hole Events	150 Robux for each attempt

These events give you XP, unique cosmetics, and in many cases even more Quantum and Singularity orbs, so it's up to the players whether they want to do them or not.

Cosmetics, on the other hand, are exchangeable objects between players, just like tools, so each object has a value given by the community. Each object has a value in "Star Gems" in the case of cosmetics, and tools in "Starlight" at 20% more than the total cost of the tool, where every 100 "Starlight" is equivalent to a single "Star gem".

Now, the "Star Gems" work as the game's payment currency, so each one has a price in Robux (the platform's premium currency), so these are the following:

Star Gems	Prices (Robux)	Transfer to USD
100	40	0.50 USD
300	120	1.50 USD
725	400	5.00 USD
1250	900	10.62 USD
2500	1950	21.65 USD

Following this line, the game may have the option to purchase a list of benefits which are purchased with Robux or even specific cosmetics along with a monthly subscription, the prices of which are detailed below.

Cosmetics

Cosmetic	Price (Robux)	USD Conversion	Star Gem Price	Function
Nebula Armor	160	2.00 USD	100	Interchangeable Cosmetic
Starry Night Orb Skin	80	1.00 USD	50	Interchangeable Cosmetic
Astro Pup Companion Skin	240	3.00 USD	500	Interchangeable Cosmetic
Meteor Bundle	800	10.00 USD	1000	Interchangeable Cosmetic

Booster's and Locators

Object	Price (Robux)	Conversion to USD	Price (Star Gems)	Function
Stellar Catalyst Booster	40	0.50 USD	25	Doubles the amount of experience gained for one hour
2x Starlight Boost	40	0.50 USD	25	Double the money earned for fifteen minutes
2x Large Starlight Boost	120	1.50 USD	50	Double the money earned for one hour
Black Hole Locator	100	1.25 USD	250	Locate a black hole event and allow free entry
Monthly Subscription Plan	N/A	4.99 USD/ Month 60 USD /Year	N/A	Get 25 free Star Gems daily / VIP Access / Extra Content

#USE: The system relies on the Boosters feeling their best, especially the Black Hole Locator due to how extremely cost-effective it is. This is designed on purpose to catch the “Whales” as quickly as possible, since the more they do, the more likely it is to get the related cosmetics, thus taking more attempts.

Game Pass

Game Pass	Price (Robux)	USD Conversion	Star gems price	Function
Vip Access Pass	320	4.00 USD	N/A	Gives access to permanent VIP upgrades but at a lower price than the subscription
Exclusive Collector Edition Skin (Time Limit)	2250	24.98 USD	N/A	Cosmetic
Double Starlight Pass	800	10.00 USD	N/A	Doubles the money earned and can be combined with limited-time multipliers

The scoreboards are based on how much money of both types is in the inventory, the more money the higher the scoreboard, thus allowing the search for duplicate items and encouraging the purchase and search for rare items, creating a loophole which seeks to exploit the feeling of "Risk Reward".

In addition to this, taking advantage of the variety of orbs, there are tables to build cosmetics from the orbs found on the map. These require blueprints which can also be exchanged or, rarely, obtained through subscriptions, which allow you to create certain cosmetics and tools.

Added to this is a "Daily Login" system, which is nothing more than a table depending on whether the player is paying or not.

These vary to further illustrate the benefits of both the subscription and VIP Access, as they are different and have quite varied prices.

These are the following by day and difference,

Yes	Normal Player	VIP	Subscribed
1	50 Starlight	5 Star gems	25 star gems
2	100 Starlight	5 Star gems	25 star gems
3	2x Starlight Booster	5 Star gems	25 star gems
4	100 Starlight	5 Star gems	25 star gems
5	10 Star Gems	Black Hole Locator	Trail Effect Blueprint
6	(4x) 2x Starlight Booster	5 Star gems	Black Hole locator

7	Trail Effect Blueprint (Cosmetic)	Trail Effect (Cosmetic)	Trail Effect + Trail Effect Blueprint (Cosmetic)
---	-----------------------------------	-------------------------	--

These accumulate with each other except for the subscription and the VIP, you can only have one at a time, if you miss the day you can pay 5 robux to keep it in case you want a specific reward, otherwise it is lost.

The reason behind this is to make the system something similar to "taking off the clocks in a casino"; the perception of time is lost, which incentivizes spending.

Streaks are claimed as soon as you enter the game to generate an instant boost, which is important to encourage spending money on them.

1.1.0 Missions

Missions are the way in which you not only complete the "Millstones" but also allow you to obtain blueprints, orbs of different types or even obtain information without having to explore too much.

Each of these varies, so the first thing is to define what orbs are on the three initial islands:

The same	Orb	It is used in missions	It is used in plans
Cristal Meteor	Crystalline orb	AND	AND
Cristal Meteor	Warm orb	And	No
Cristal Meteor	Run away from the world	And	And
Cristal Meteor	Celestial stardust orb	No	And
Moon Base	Celestial Star Orb	And	And
Moon Base	Celestial Comet Orb	And	No
Moon Base	Chromatic Orb	No	And
Moon Base	Farsight Orb	And	And
Nebula Forest	Orb of the fog	and	and
Nebula Forest	Stardust Orb	and	and

Nebula Forest	Lunar Tear Orb	and	and
Nebula Forest	Prismatic Orb	and	and

The idea is that each of these orbs will appear in a specific area of the map, and some will appear in places that are difficult to access without exploring a little more than usual, along with treasures around these areas that will reappear.

In the missions you have to find a specific number of these and deliver them, the missions can rarely be repeated by dropping plans but these will vary and ask for different things between a pool of three based on adding a small extra tag to the name:

Mission	Requirement	Plano Drop Rate
Collector	Collect 4 orbs and deliver them to the "X" type NPC	1.25% / 2.25% a Nebula Forest
Explore	Find a treasure, grab it and talk to the NPC	0.5% / 0.7555552% a Nebula Forest
Visionary	Collect one of each orb on the map	N/A / 0.1% in Nebula Forest
Creative	Create an object with a blueprint	100% / Give plans in Nebula Forest

Where "X" is any orb in the list above.

Nebula Forest is designed to be the third and final zone in early versions, and each mission is randomly spawned, with the exception of the first one, which will always spawn with the first NPC you speak to.

In addition to these, during events you will be able to create "Constellations." Constellations consist of obtaining a list of orbs in a specific order, but this should vary from mission to mission and can even include orbs from different Islands.

As an added bonus, a rare event known as "Astro Pup's Challenge" may occur, Astro will appear on the map and you must find his toy and bring it to him, this does not give blueprints but it does give a lot of Experience.

The VIP pass and consequently the subscription adds the possibility once a day to finish a mission instantly except for those that occupy a plane and doubles the Drop Rates (if they are guaranteed it does NOT give two planes).

Added to this on the VIP Island there are missions with a 50% higher base drop rate so they are more worthwhile and are repeated up to five times a day and when a rare item drops from a mission by any player due to a VIP mission a message is thrown to all players showing it, otherwise it is shown as a normal message in the chat.

1.2.0 Black Hole Events

1.2.1 Small Black Hole

While other events are structured and change each season, Black Holes appear randomly on the map and are designed to be more difficult.

They range from having to grab a certain number of orbs and give them to the black hole so that it gives you its items, to having to run from it in parkour sequences or complex puzzles which are designed to be difficult and feel great when completed.

These appear on the map for 15 minutes and change location every 15 minutes. The locator tells you where it is and locks it in place for the next hour, in addition to allowing you free entry.

You also need to complete at least one to be able to trade (This is to make it more difficult to use Bots to get items) and the entry costs a Quantum and Singularity orb

This is the Drop-Rates table.

Object	Amount	Drop Rate	Interchangeable
Quantum / Singularity	1 of each	100%	AND
Black Hole Trail Blueprint	1	2%	AND
Black Hole Armor Piece	1 (Four Pieces)	2% per piece	And
Black Hole Pet	1	0.25%	And

The ideal would be to have a puzzle based on rotating things (following the theme of a black hole) in which you have to fit six pieces together to create a spiral.

The second is a parkour running from the black hole in order to reach a safe point.

The third is based on the black hole turning everything black on an island and you must search for orbs until you fill the black hole so that it decreases.

This is the case of small black holes.

1.2.2 Big Black Hole.

It consists of three phases which are exact and always occur the same way.

Phase 1:

When the large black hole is activated it flashes for all players for half an hour and must be found, the only way to know if it is a large one is by finding it following the process of a small one.

The player is alerted that the black hole is about to appear and the first entry costs nothing. During the half hour it is active, it can be repeated even if lost. The first time is free, but after the second time, it costs a Quantum or Singularity Orb.

Phase 2:

Players are placed in special zones within the wormhole where gravity is lower and they are given a greater challenge where they have to complete a mission quickly, in that zone there is everything necessary to complete it.

For this reason these are predefined.

Phase 3:

All players receive a reward from the pol, the better the play, the more likely something good will come out, if you have VIP you can get a second reward for two Quantum and Singularity orbs.

Rewards Table

Object	Amount	Drop Rate	Interchangeable
How much orb	1	50-100%	AND
Black hole of conquest blueprint	1	2%-5%	AND
Complete Black Hole armor	1	1%-4%	And
Black hole Phantom Armor Pet blueprint	1	0.125%-0.5%	And

In both cases the Re-Run costs 150 Robux.

1.3.0 Exchange and Economy

Players set the prices, we as developers really can't set the prices but the first and most vital thing is that there should always be an item before exchanging and a confirmation with all the items listed on the screen to avoid problems with "Scams", they will still happen but it is preferable to do this so that it is not really our fault.

On the other hand, exchanges are unlocked after completing a "Black Hole event," so it is vital that these are polished. In each exchange, a maximum of twenty-five items can be placed, including duplicates, and both players must agree and confirm the transaction beforehand.

This can be requested from the user interface, and if the user is a VIP, they can go to their unique island and trade only with people with that Game Pass or subscribers to the project. Instead of 25 items, they can place 50 and trade with anyone from any island. The VIP island serves as a way to see if people actually have valuable items, or at least the possibility of having them.

Each item traded leaves a history for each player which is saved as long as they are on the same server.

This confirmation process also applies to the Store, which confirms everything before it is purchased, even if it involves Robux. In the case of items purchased from the store, these are marked with their Robux price at the time of exchange and are received as quickly as possible.

If the item is limited in time, it is marked with a colored border and is the first thing you'll see in the store along with special bundles.

The store must be divided into:

Cosmetics: Where there are only cosmetic items

Power-ups: Where there are only power-ups

Currency: Where the normal and premium money are located along with the boosts

Game pass: donde solo hay game pass.
